PREFACE.

THE object aimed at in the preparation of this book was to place in the hands of the pupils a synopsis of the principal topics to which they should pay special attention in the preparation of their lessons; and to have these topics so connected that the lessons may be easily learned and retained.

The necessity for such a plan has been long apparent from the many failures made in teaching these branches in many of our schools.

Take, for instance, the study of History. How many teachers have labored hard and long trying to "get through the book" with a class, only to find on examination that very few, if any, of the pupils could relate, either orally or in writing, in language not borrowed from the text-book (and few even in that) the history of any important period or campaign.

Why is this, if not because too much time has been spent in memorizing *unimportant* matter, and that, too, so disconnected that the first part of the story was forgotten before the last was learned?

Place the text-book *alone* in the hands of the teacher, and in too many cases questions from the margins of the pages are "shot at" the class and answers as quickly returned; and on examination it is found that the pupils, and perhaps the teacher, are using language the meaning of much of which they have not the slightest conception.

Take the text-book away from the scholars, *and teacher too*, during the time of recitation; assign the lessons by topics; let the pupils use the text-books for reference in preparing their

lessons, and require the recitations to be both oral and written, and it will not be long before the pupils will find it easier to use language with which they are acquainted, and to have the facts connected in the order in which they occurred.

There will be no difficulty in remembering all the dates that should be remembered; and teachers will soon be ashamed to come before their classes unprepared to lead them rather than be dragged along by them.

The same may be truly said of Geography. There is probably more time wasted in the study of Geography than there is spent profitably. We need more written work, more map-drawing, more learning where *important* cities, rivers, railroads, mountains, forests, seas, etc., are, and *why they are important*; and less searching for minor details and less important places that have nothing about them to recommend them to the mind of the child.

Good wall maps with text-books for reference in preparing the lessons, and an analysis of the more important topics from which to assign them seem more in harmony with the limited time in which a large majority of our children must procure their knowledge of Geography.

Whatever advantage is gained by teaching History or Geography topically is equally applicable to Physiology and Arithmetic. The plan of teaching by topics is not new; it has been practiced in our best schools for years.

In placing the topics on the board by the teacher, and copying them by the pupils, much valuable time is lost that may be saved by placing this work in their hands and assigning the lessons from it.

With the Topical Analysis in the hands of the pupils, a non-uniformity of text-books is a benefit, rather than a disadvantage, to the class, and is certainly a great saving to the patrons of our schools.

Hoping that this work will find its proper place in the school-room, it is respectfully submitted.

ORDER OF ANALYZING A SENTENCE.

1. Tell whether *declarative*, *interrogative*, *imperative*, or *exclamatory*.
2. If *compound*, tell how many members it contains and analyze each member, beginning with the first.
3. If *complex*, tell how many propositions it contains, and name the principal proposition and the subordinate proposition. Analyze each proposition (the principal first) in the same order as simple sentences are analyzed.

4. If *simple*,

1. Name the simple subject.
2. Name the simple predicate.
3. Name each modifier of the simple subject, tell whether simple, complex, or compound, and of what class. Also, analyze the modifiers when complex or when of the third class.
4. Analyze the complete predicate in the same manner as the complete subject was analyzed.

MODEL FOR ANALYZING SENTENCES.

"On that same night the Banshee howled
 To fright the evil dame,
 And fairy folks, who loved Kathleen,
 With funeral torches came."—*Whittier*.

ANALYSIS.—This is a compound declarative sentence consisting of two members.

The first member—

"On that same night the Banshee howled
 To fright the evil dame,"

is a simple sentence; and the second member—

"And fairy folks, who loved Kathleen,
 With funeral torches came,"

is a complex sentence consisting of two propositions, of which the principal proposition is "And fairy folks with funeral torches came;" and the subordinate proposition is "who loved Kathleen."

Of the first member "Banshee" is the simple subject and "howled" the simple predicate.

The simple subject is modified by "the," a simple adjective element of the first class.

The simple predicate is modified by "On that same night," a complex adverbial element of the second class, of which "On" is the leader and "night" the subsequent. The subsequent is

modified by "that" and "same," simple adjective elements of the first class. The simple predicate is further modified by "to fright the evil dame," a complex adverbial element of the second class, of which "to fright" is the basis, modified by "the evil dame," a complex objective element of the first class, of which "dame" is the basis, modified by "the" and "evil," simple adjective elements of the first class.

Of the second member "folks" is the simple subject of the principal proposition and "came" is the simple predicate.

The simple subject is modified by "fairy," a simple adjective element of the first class; also by the subordinate proposition, "who loved Kathleen," a complex adjective element of the third class, of which "who" is the simple subject, and "loved" the simple predicate. The simple subject of the subordinate proposition is unmodified. The simple predicate is modified by "Kathleen," a simple objective element of the first class.

The simple predicate ("came") of the second member is modified by "with funeral torches," a complex adverbial element of the second class, of which "with" is the leader and torches the subsequent. The subsequent is modified by "funeral," a simple adjective element of the first class.

"And" is a coördinate connective.

Measuring—Height one space; whole width, three spaces; distance between straight lines, one space; distance from straight line to dot, one-half space; length of horizontal curve, one-half space.

Analysis—Principles 2, 1, 2, 1, 2, horizontal 2.

Formation—Begin on base line and ascend with a right curve, on connective slant one space; unite angularly and descend with a straight line on main slant to base; by short turn ascend with a right curve on connective slant one space; unite angularly and descend with a straight line on main slant to base; by short turn ascend one space with a right curve on a slant midway between connective and main slants; make a light dot and finish with a horizontal right curve carried one half space to the right.
